

JFServer Rules

John Franklin, Ing. Václav Malý
Initially based on rules of ttdistas.es servers.

Version 2.0.1, 28 August 2024

Preamble We, OpenTTD fans from all over the world, craving realism and scorning pointless feeder systems, agree on these rules for JFServer to ensure it develops railways and provides interchanges at hub stations, as well as maintains realistic gameplay and creates a respectful space between the players:

1 Introductory Provisions

1. Players join the server free and equal in their rights. Any distinctions may be founded only upon the general good.
2. The server aims to create a satisfying parallel world. It is no need to fully recreate reality, but construction of transport lines and exploitation of towns and industries cannot be highly unlikely to happen in common sense. Players strive for a realistic style of play.
3. Players are required to behave respectfully to other players. Any behavior contrary to general morality, such as offensive names and racism, is strictly prohibited. Aggressive gameplay is forbidden.
4. If the Rules do not expressly prohibit it, the players may arrange their rights and obligations differently from the Rules; arrangements that violate good morals, public order or rules regarding the status of persons are prohibited.

2 Gameplay

5. The number of available companies is limited; a player can act on behalf of only one company, either alone or sharing it with other players.
6. Players away from keyboard (AFK) should move to spectators with the button "Spectate".
7. Blocking or sabotaging companies, industries and towns is strictly forbidden.
8. Players must develop their transport company in a friendly way with minimal damage and maximal benefit to the game world.

2.1 Environmental Impact

9. No huge terraforming such as removing sea and mountains; use tunnels and bridges. Ditches and embankments may be max 1 tile high.
10. Never plant trees, in order to avoid lags of the game. The cost of planting trees is set to 2^{16} times higher than the original.
11. It is forbidden to connect two land masses with bridges or tunnels, unless they exist in the real world at real dates. Use ships or planes.
12. No building roads which disallow houses to be built along them in towns, except designated highways or elevated roads.
13. Players cannot massively purchase land significantly larger than the needed to enlarge their facilities.
14. Massively building same industries, including hotels, at the same place is strictly forbidden. Never massively build multiple industry complexes.

2.2 Optional Requirements

15. A key area the player should focus on is rail transport. As such, it should be implemented in a structured form with different classes of service sorted by stopping patterns and service speeds. Timetabling is encouraged. Avoid building metro-like long-distance lines.
16. Transport mail along with passengers to ensure town growth.
17. New passenger and mail transport lines must connect with existing lines already set. For example, if a company has built a passenger transport line between London and Paris, but there is no transport connections between Paris and Luxembourg, it is prohibited for this company to run passenger transport line between Luxembourg and Frankfurt.
18. Copying lines of other companies with no or inconvenient transfers to them is strictly prohibited.
19. No abuse of station spread. The station can be split into 2 parts, separated by a maximum of 5 tiles between the parts (Manhattan distance). If one of the parts is not used by vehicles, it can only be 1 tile.
20. It is forbidden to take cargo from industries if there are other companies' active stations. Hotels associated with towns with at least 2500 inhabitants are excluded. Cooperations with the agreement among all companies involved are excluded.
21. Airplanes can only be used as a supplement in routes where another mode of transport exists. Cases where inland transport could not reach both sides of a route simultaneously due to the existence of oceans are excluded.

- 22. Planes cannot be used to transport bulk/raw cargos.
- 23. When vehicle breaking is turned on, make sure each vehicle has a order going to depot.

2.3 Special Provisions about Infrastructure Sharing

- 24. Sharing infrastructure allows for an efficient transport network for all carriers and as such is strongly recommended.
- 25. Players should create road stops at stations of other modes of transport to facilitate the creation of a common transport network.
- 26. The operation of trains on the network of other companies is possible based on the mutual agreement of both sides.
- 27. Players should ensure they are sharing the infrastructure without causing breakdowns of transport systems, such as using excessively long trains that stuck at the platforms.

3 Penalties

- 28. Ignoring, not knowing or misunderstanding the rules does not excuse breaching them.
- 29. Companies being obviously inactive will be deleted.
- 30. Companies that violate these rules may be forced to remedy the damages caused and/or pay fines, incorporated to other company or eliminated, depending on relevancy of the delicts committed. Their players may be temporarily or permanently banned.

4 Final Provisions

- 31. By connecting to the server, a player expresses their consent with the Rules and promises to follow them, being aware of that breaching them is subject to legal repressions described above.
- 32. The “official” language of the server is English. In public or talking to unknown persons, always use English.
- 33. These Rules are for guidance only and must be interpreted in accordance with good morals, public order and international law.
- 34. Definitive decisions are to be made by admin (i.e. John Franklin, acting on behalf of Company 1); they also reserve the right to make any changes to the game, as well as to the Rules.
- 35. The Rules are valid from 28 August 2024 for all games played since this date.
